

Dear Virtual Air Traffic Controller, welcome to our community!

Pakistan vACC aims to provide air traffic control services for online flight simulation within the airspace of the Islamic Republic of Pakistan. We promote virtual air traffic in our airspace and organize the basic and further education of virtual air traffic controllers and pilots.

From beautiful cities of Islamabad and Lahore to the scenic thrill-seeking approaches into Skardu and Gilgit, you are guaranteed to have a fun experience in our skies.

### Sector Files

Thank you for downloading the latest Pakistan vACC sector file.

These sector files are handcrafted by our specialists and are made with love.

These files are to be used with EuroScope only. Installing the latest BETA is crucial for the sector files to function properly.

Please note that altering anything will render the files un-useable. Changing the predefined profiles i.e., range, callsign, controller info etc. is not encouraged as this is to make sure everything is standardized throughout our region.

If you have any queries on how to use this sector file or EuroScope, please contact your mentor or the Pakistan vACC Operations Team.

For any suggestions/error reporting, please notify by e-mail:
